In the Claims

 (Currently Amended) A computer readable storage medium having a computer program stored thereon and representing a set of instructions that when executed by a computer causes the computer to:

acquire a B₁ field map for each transmit coil of a transmit coil array;

determine from the B₁ field maps a spatiotemporal variation of a composite B₁

field; and

generate an RF pulsing sequence tailored to a respective transmit coil-such that RF power-deposition during MR imaging is reduced.

- 2. (Original) The computer readable storage medium of claim I wherein the set of instructions further causes the computer to minimize RF power deposition across an imaging volume without causing substantial deviation of a RF excitation profile created by the transmit coil array from a desired excitation profile.
- 3. (Original) The computer readable storage medium of claim 1 wherein the set of instructions causes the computer to minimize RF power deposition and embodies a principle that is applicable to any transmit coil array geometry.
- 4. (Original) The computer readable storage medium of claim 1 wherein the set of instructions causes the computer to determine an RF pulse scheme for a transmit coil based on at least an effective B₁ field for the transmit coils.
- 5. (Original) The computer readable storage medium of claim 4 wherein each effective B₁ field reflects mutual coupling of a transmit coil and at least another transmit coil.
- 6. (Original) The computer readable storage medium of claim 1 wherein the set of instructions further causes the computer to design each pulsing sequence such that parallel RF excitation with the transmit coil array produces a result that is consistent with a desired excitation profile.
- (Original) The computer readable storage medium of claim 1 wherein the set of instructions further causes the computer to acquire 2D or 3D MR data.

Zhu, Yudong S/N: 10/723,311

8. (Original) The computer readable storage medium of claim 1 wherein the transmit coil array includes a linearly arranged plurality of transmit coils.

- 9. (Original) The computer readable storage medium of claim 8 wherein each transmit coil is driven by a dedicated RF amplifier.
 - 10. (Currently Amended) An MRI apparatus comprising:
- a magnetic resonance imaging (MRI) system having a magnet to impress a polarizing magnetic field, a plurality of gradient coils positioned about a bore of the magnet to induce a magnetic field gradient, a transmit coil array having a plurality of transmit coils, and an RF transceiver system and an RF switch controlled by a pulse module to transmit RF signals to an RF coil assembly to acquire MR images; and
- a computer programmed to regulate RF power-deposition on a subject during MR imaging through independently control of the plurality of transmit coils.
- 11. (Original) The MRI apparatus of claim 10 wherein the computer is further programmed to simultaneously achieve RF excitation consistent with a desired excitation profile and SAR reduction on the subject.
- 12. (Original) The MRI apparatus of claim 10 wherein the computer is further programmed to control RF excitation of the transmit coil array to focus RF excitation on a region-of-interest within the subject.
- 13. (Original) The MRI apparatus of claim 10 wherein the computer is further programmed to design an RF pulse waveform for a transmit coil based on at least an effective B₁ field generated by the transmit coil.
- 14. (Original) The MRI apparatus of claim 10 wherein the computer is further programmed to acquire 2D or 3D MR data.
- 15. (Original) The MRI apparatus of claim 10 wherein the plurality of transmit coils of the transmit coil array is linearly arranged.

Zhu, Yudong S/N: 10/723,311

16. (Original) The MRI apparatus of claim 10 wherein each transmit coil is driven by a dedicated RF amplifier.

- 17. (Original) The MRI apparatus of claim 10 wherein the computer is further programmed to design an RF pulse waveform for each transmit coil such that side lobes in a parallel RF excitation by the transmit coil array are reduced.
- 18. (Currently Amended) A method of MR imaging comprising the steps of:

 determining a region-of-interest in an imaging volume; and
 independently controlling RF excitation by of each transmit coil of a plurality of
 transmit coils of a transmit coil array such that RF power deposition is reduced.
- 19. (Currently Amended) The method of claim 18 further comprising the step of independently controlling RF excitation by of the plurality of transmit coils such that RF power absorption by a subject disposed in the imaging volume is minimized on average over the imaging volume.
- 20. (Original) The method of claim 19 further comprising the step of minimizing RF power deposition over the imaging volume without causing substantial deviation of a parallel RF excitation profile created by the transmit coil array from a desired excitation profile.
- 21. (Original) The method of claim 18 further comprising the step of minimizing RF power deposition, which embodies a principle that is applicable to any transmit coil array geometry.
- 22. (Original) The method of claim 18 further comprising the step of determining an RF pulse scheme for each transmit coil based on at least an effective B₁ field for each transmit coil.
- 23. (Original) The method of claim 22 wherein each effective B_1 field includes data regarding mutual coupling of the plurality of transmit coils.
